

RealmSpace — Internal Language Guide

A living reference guide for how Floats talks about RealmSpace — internally and externally. Use this when writing decks, proposals, outreach emails, or any client-facing material. Update it as the language evolves.

1. The One-Sentence Description

RealmSpace helps brands and venue operators see what happened in a physical experience, prove what worked, and improve what happens next.

Use this as the anchor. If a sentence in a deck or proposal doesn't connect back to one of these three ideas — see, prove, improve — it probably doesn't need to be there.

Note: This replaces the older framing of 'immersive experiences' as the lead story. Immersive execution is still part of what Floats does — but it is now the delivery format, not the commercial narrative.

2. The Three-Part Commercial Narrative

Every deck, proposal, and outreach email should be built around this sequence. In this order.

Step	What It Means	Plain English for Clients
Measurement (See)	RealmSpace captures what people actually do in a physical space — where they go, what they engage with, how long they stay, what drives action	You'll know exactly what happened at your activation — not guesswork, not footfall estimates. Real behavioural data.
Attribution (Prove)	RealmSpace connects spatial behaviour to business outcomes — which touchpoints drove the most engagement, which content performed, what correlated with conversion	You'll be able to show your team — and your CFO — that the spend was worth it. With numbers, not anecdotes.
Action (Improve)	RealmSpace translates insights into decisions — what to change for the next activation, what to replicate, how to brief the next brief better	You'll walk away with a clear read on what to do differently next time. Every activation makes the next one smarter.

3. Key Terms — What To Say and What To Avoid

Term	Use This	Not This	Why
Product name	RealmSpace	Realm Space (two words) / realmspace (all lower)	One word, capital R and S. Consistent across all materials.
Company name	Floats XR	FloatsXR / Floats / FLOATS XR	Two words, XR in caps. Don't abbreviate in client materials.

Term	Use This	Not This	Why
What RealmSpace is	A privacy-first intelligence layer for physical experiences	An immersive technology platform / XR product / spatial tool	Leads with the business value and privacy angle, not the technology
What it does	Captures, measures, and reports on how people move through and engage with physical spaces	Tracks people / monitors visitors / collects data	Avoid surveillance language — privacy-first is a core differentiator
The physical setup	Booths and zones / activation zones / spatial touchpoints	Devices / sensors / hardware / tracking equipment	Keep it simple and experience-led, not technical
The data it produces	Engagement signals / spatial telemetry / interaction data	User data / personal data / tracking data	Signals and telemetry sound purposeful and technical without sounding invasive
The output for clients	Insight reports / activation benchmarks / performance intelligence	Data dump / analytics report / spreadsheet	Frame it as intelligence that informs decisions, not raw data
The ROI angle	Prove what worked / measurable activation value / evidence-backed ROI	Return on investment / ROI analysis / performance metrics	Client language, not finance language
Privacy positioning	Privacy-aware / privacy-first / no facial recognition / no cross-session re-identification	Anonymous tracking / GDPR compliant / non-invasive	Be specific — vague privacy claims sound defensive; specific claims sound confident
Activation types	Event activations / booth experiences / brand zones / kiosk deployments	Immersive experiences / XR activations / VR/AR experiences	Lead with the physical context, not the technology format

4. The Offer Architecture — Three Layers

When describing what Floats sells, always use this three-layer structure. Never describe it as a single product or a bespoke service.

Layer	What It Is	Client-Facing Description	Sold As
Experience Layer	The physical activation — booth, kiosk, digital surface, immersive zone, branded touchpoint	The environment people walk into, interact with, and remember — designed and built by Floats XR	Standalone or bundled
Measurement & Insight Layer	RealmSpace — sensors, telemetry, dashboard, session replay, plain-English query surface	The intelligence system that tells you what people actually did — where they went, what they engaged with, how long they stayed, what drove action	Standalone (Intelligence Layer Only) or bundled
Action & Reporting Layer	Post-activation report, benchmark data,	The output your team can actually use — a clear read on	Bundled with Measurement

Layer	What It Is	Client-Facing Description	Sold As
	recommendations, integration with client CRM or marketing stack	what worked, what to change, and how to brief the next activation better	or as retainer

Pricing note: Quote each layer separately in proposals. Never bundle them invisibly. Clients should always see what they are paying for at each level.

5. Phrases Captured From the June 8 Sync

These phrases came directly from the founding team in the weekly sync. They are the raw material for sharper commercial language — use them as building blocks, not verbatim copy.

Raw Phrase	What It Means	Client-Friendly Version
Booths and zones	The physical abstraction for how RealmSpace instruments a space — a booth is a single branded touchpoint, a zone is a larger defined area	We instrument your activation space — whether that's a single kiosk or an entire branded zone — and measure everything that happens inside it
Telemetry for physical spaces	Structured data capture from sensors placed in physical environments — similar to how web analytics captures clicks, but for physical behaviour	We give your physical activation the same measurement capability your website has — real data on what people did, not just how many showed up
Natural-language query layer	A feature that lets clients ask questions about their activation data in plain English — e.g. 'Which touchpoint had the longest dwell time on day 2?'	You can ask questions about your event data the same way you'd ask a colleague — in plain language, without needing a data analyst
Predictive ROI	Moving beyond retroactive reporting (what happened) to forward-looking recommendations (what to do next time to get a better result)	We don't just report on what happened. We use what we learned to tell you what to change next time — so every activation gets smarter
Privacy-aware telemetry	Data capture that is structured to protect individual identity — no facial recognition, no persistent cross-session tracking, no personally identifiable data	RealmSpace measures behaviour, not people. No facial recognition. No personal data. Just spatial signals that tell you how your activation performed
Session-scoped graph logic	Technical term — means data is organised by individual visit sessions, not persistently linked to individuals over time	Each visit is measured independently. We never build profiles on your visitors across events or over time
Attribution and action platform	The strategic framing for what RealmSpace is — not just a measurement tool, but a system that connects spatial data to business outcomes and next steps	RealmSpace connects what happened at your event to what it meant for your business — and what to do about it

6. Language to Retire

These phrases were used in earlier Floats materials and should be phased out of all new decks, proposals, and outreach.

Retire This	Replace With	Reason
Immersive experience company	Spatial intelligence company / privacy-first intelligence layer for physical experiences	Too vague and oversaturated — every XR agency says this
Wow factor / memorable experiences	Measurable activations / evidence-backed brand experiences	Emotion-first language without business outcome — doesn't justify spend
We build immersive worlds	We help brands understand and improve their physical presence	Too abstract for B2B buyers — they need to see business value immediately
XR / AR / VR activations	Spatial experiences / activation zones / booth experiences (only mention AR/VR if specifically relevant)	Tech-first framing confuses buyers who don't know the acronyms
Cutting-edge technology	Proven at [event name] / deployed across [X] activations	Claim without evidence — replace with specific proof points always
We track audience behaviour	We capture engagement signals across your activation	Track and behaviour have surveillance connotations — avoid them
Data collection	Insight generation / engagement measurement	Collection implies extraction — generation implies value creation

7. How the Language Shifts by Audience

The core message stays the same. The emphasis shifts based on who you are talking to.

Audience	Lead With	Supporting Points	Avoid
Brand / Marketing Manager	Proof that the activation worked — engagement data, dwell time, what drove action	ROI story, benchmark comparison, 'your CFO will understand this' angle	Technical language, sensor architecture, data governance details
Event Organiser	Better sponsor experiences that give sponsors a reason to come back	Sponsor retention, differentiated packages, organiser data on what sponsors activated best	Measurement-heavy language — they care about sponsor satisfaction first
C-Suite / Decision Maker	Commercial outcome — predictable ROI, repeatable activations, defensible spend	Case study evidence, multi-activation value, cost-per-insight logic	Feature lists, technical specs, long explanations of how it works

Audience	Lead With	Supporting Points	Avoid
Tech / Product Stakeholder	Data architecture, privacy model, integration capability	Telemetry approach, session-scoped logic, CRM integration, query surface	Over-simplified language — these buyers respect technical specificity
Partnership Target	Mutual value — how RealmSpace extends what they offer their clients	Complementary capability, shared target client base, co-deployment model	Hard sales pitch — partnerships are relationship-first conversations

8. Naming and Capitalisation Rules

- RealmSpace — capital R, capital S, one word. Always. No exceptions in client materials.
- Floats XR — two words, XR in capitals. Use the full name in first references in any document.
- realmspace — lowercase version may be used in internal technical documentation only, never in client-facing materials.
- The product — refer to as 'RealmSpace' not 'the platform', 'the tool', or 'the system' in client materials.
- Intelligence layer — useful shorthand internally. In client materials always pair it with context: 'RealmSpace, the intelligence layer for physical experiences.'

Branding note: Logo and typography direction is being finalised — starting with black and white typographic options before adding colour. Until confirmed, do not use unofficial colour variants in client decks.
